

DEVKITZ™ Ecosystem

Master Command Protocol

Architecture, Agents, and Immutable Laws // v1.06.0_01 // Auth: 777

A Closed, Highly Regulated AI Loop

The Vanilla Matrix (Tech Stack)

APPROVED (Native Portability) 	FORBIDDEN (Zero Bloat Policy) 
Vanilla HTML5, CSS3 (Custom Properties), JS ES6+	React, Vue, Angular
DuckDB & Apache Iceberg (Offline-First Data)	Tailwind CSS
Node.js 18+ / Express.js (Backend)	jQuery

Exception: Chrome Extension dkz-hub operates independently. All internal modules MUST be portable files. MUST be portable standalone files.

The Prime Directives

0

BE PART OF THE THE SOLUTION.

Every action, commit, and line of code must improve the system. Problems are solved, not passed on. Obstacles are removed, not bypassed.

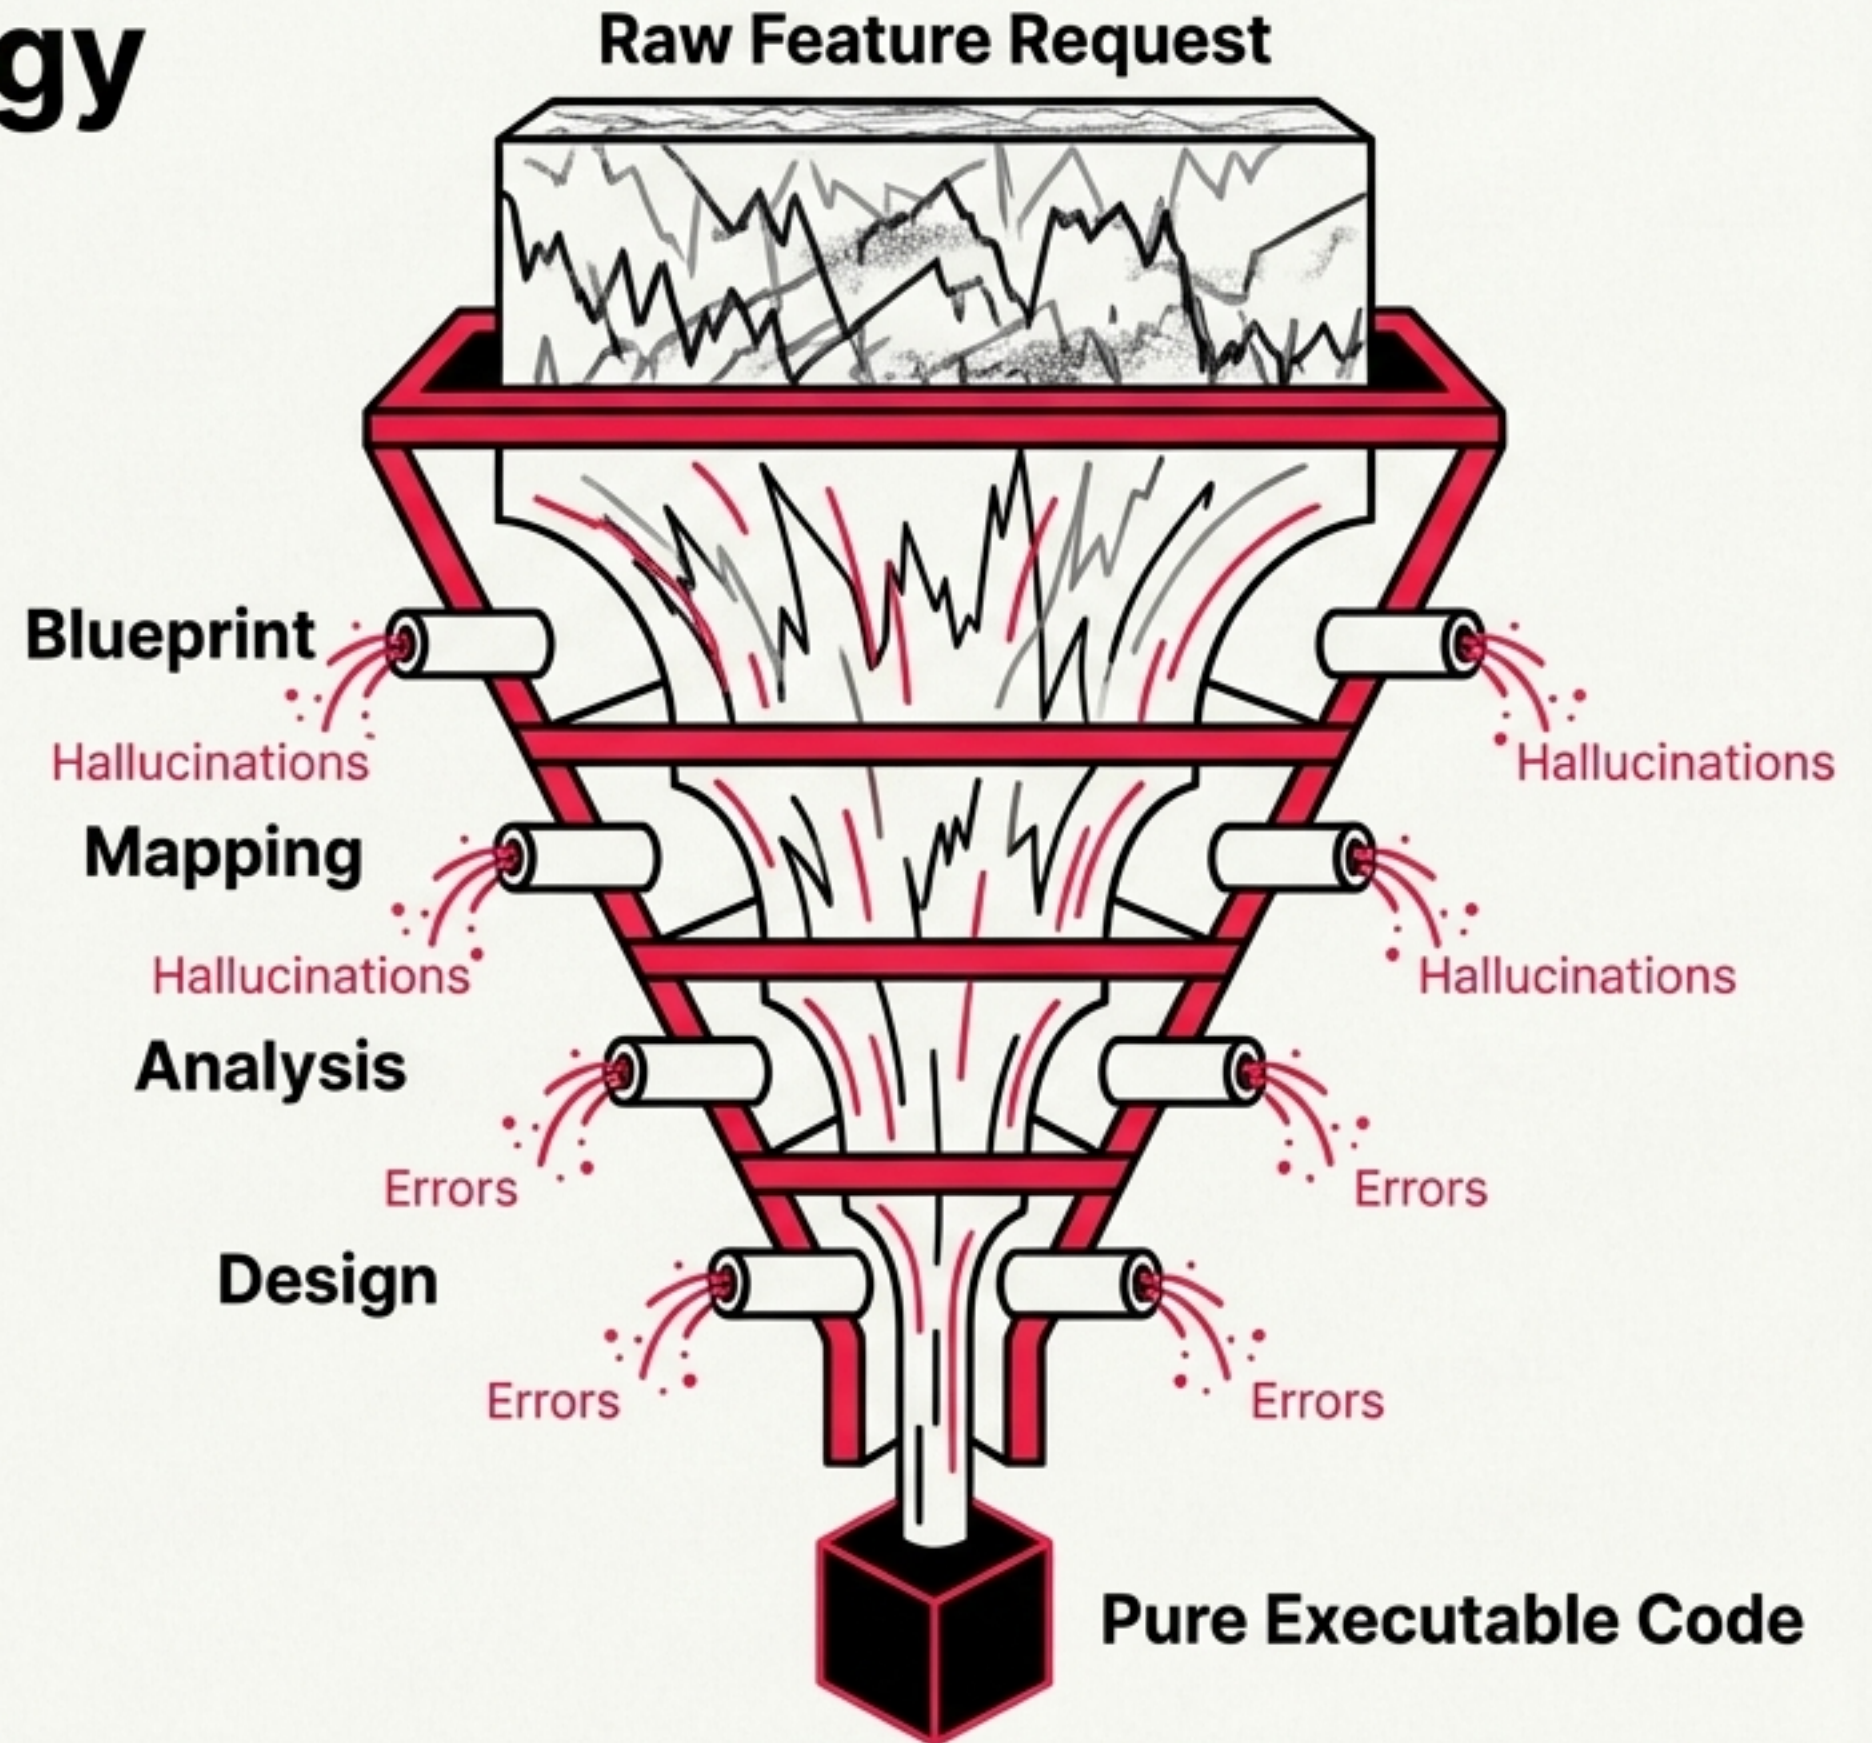

1

NEVER DELETE. ALWAYS ARCHIVE.

Knowledge is the highest currency. There is no undo. Deleted knowledge is lost forever; archived material is tomorrow's gold.

The BMAD™ Methodology

One agent cannot do everything.
Generalization breeds hallucinations.
Specialization guarantees high-fidelity
execution. Every task must pass through
four strict filters before coding begins.

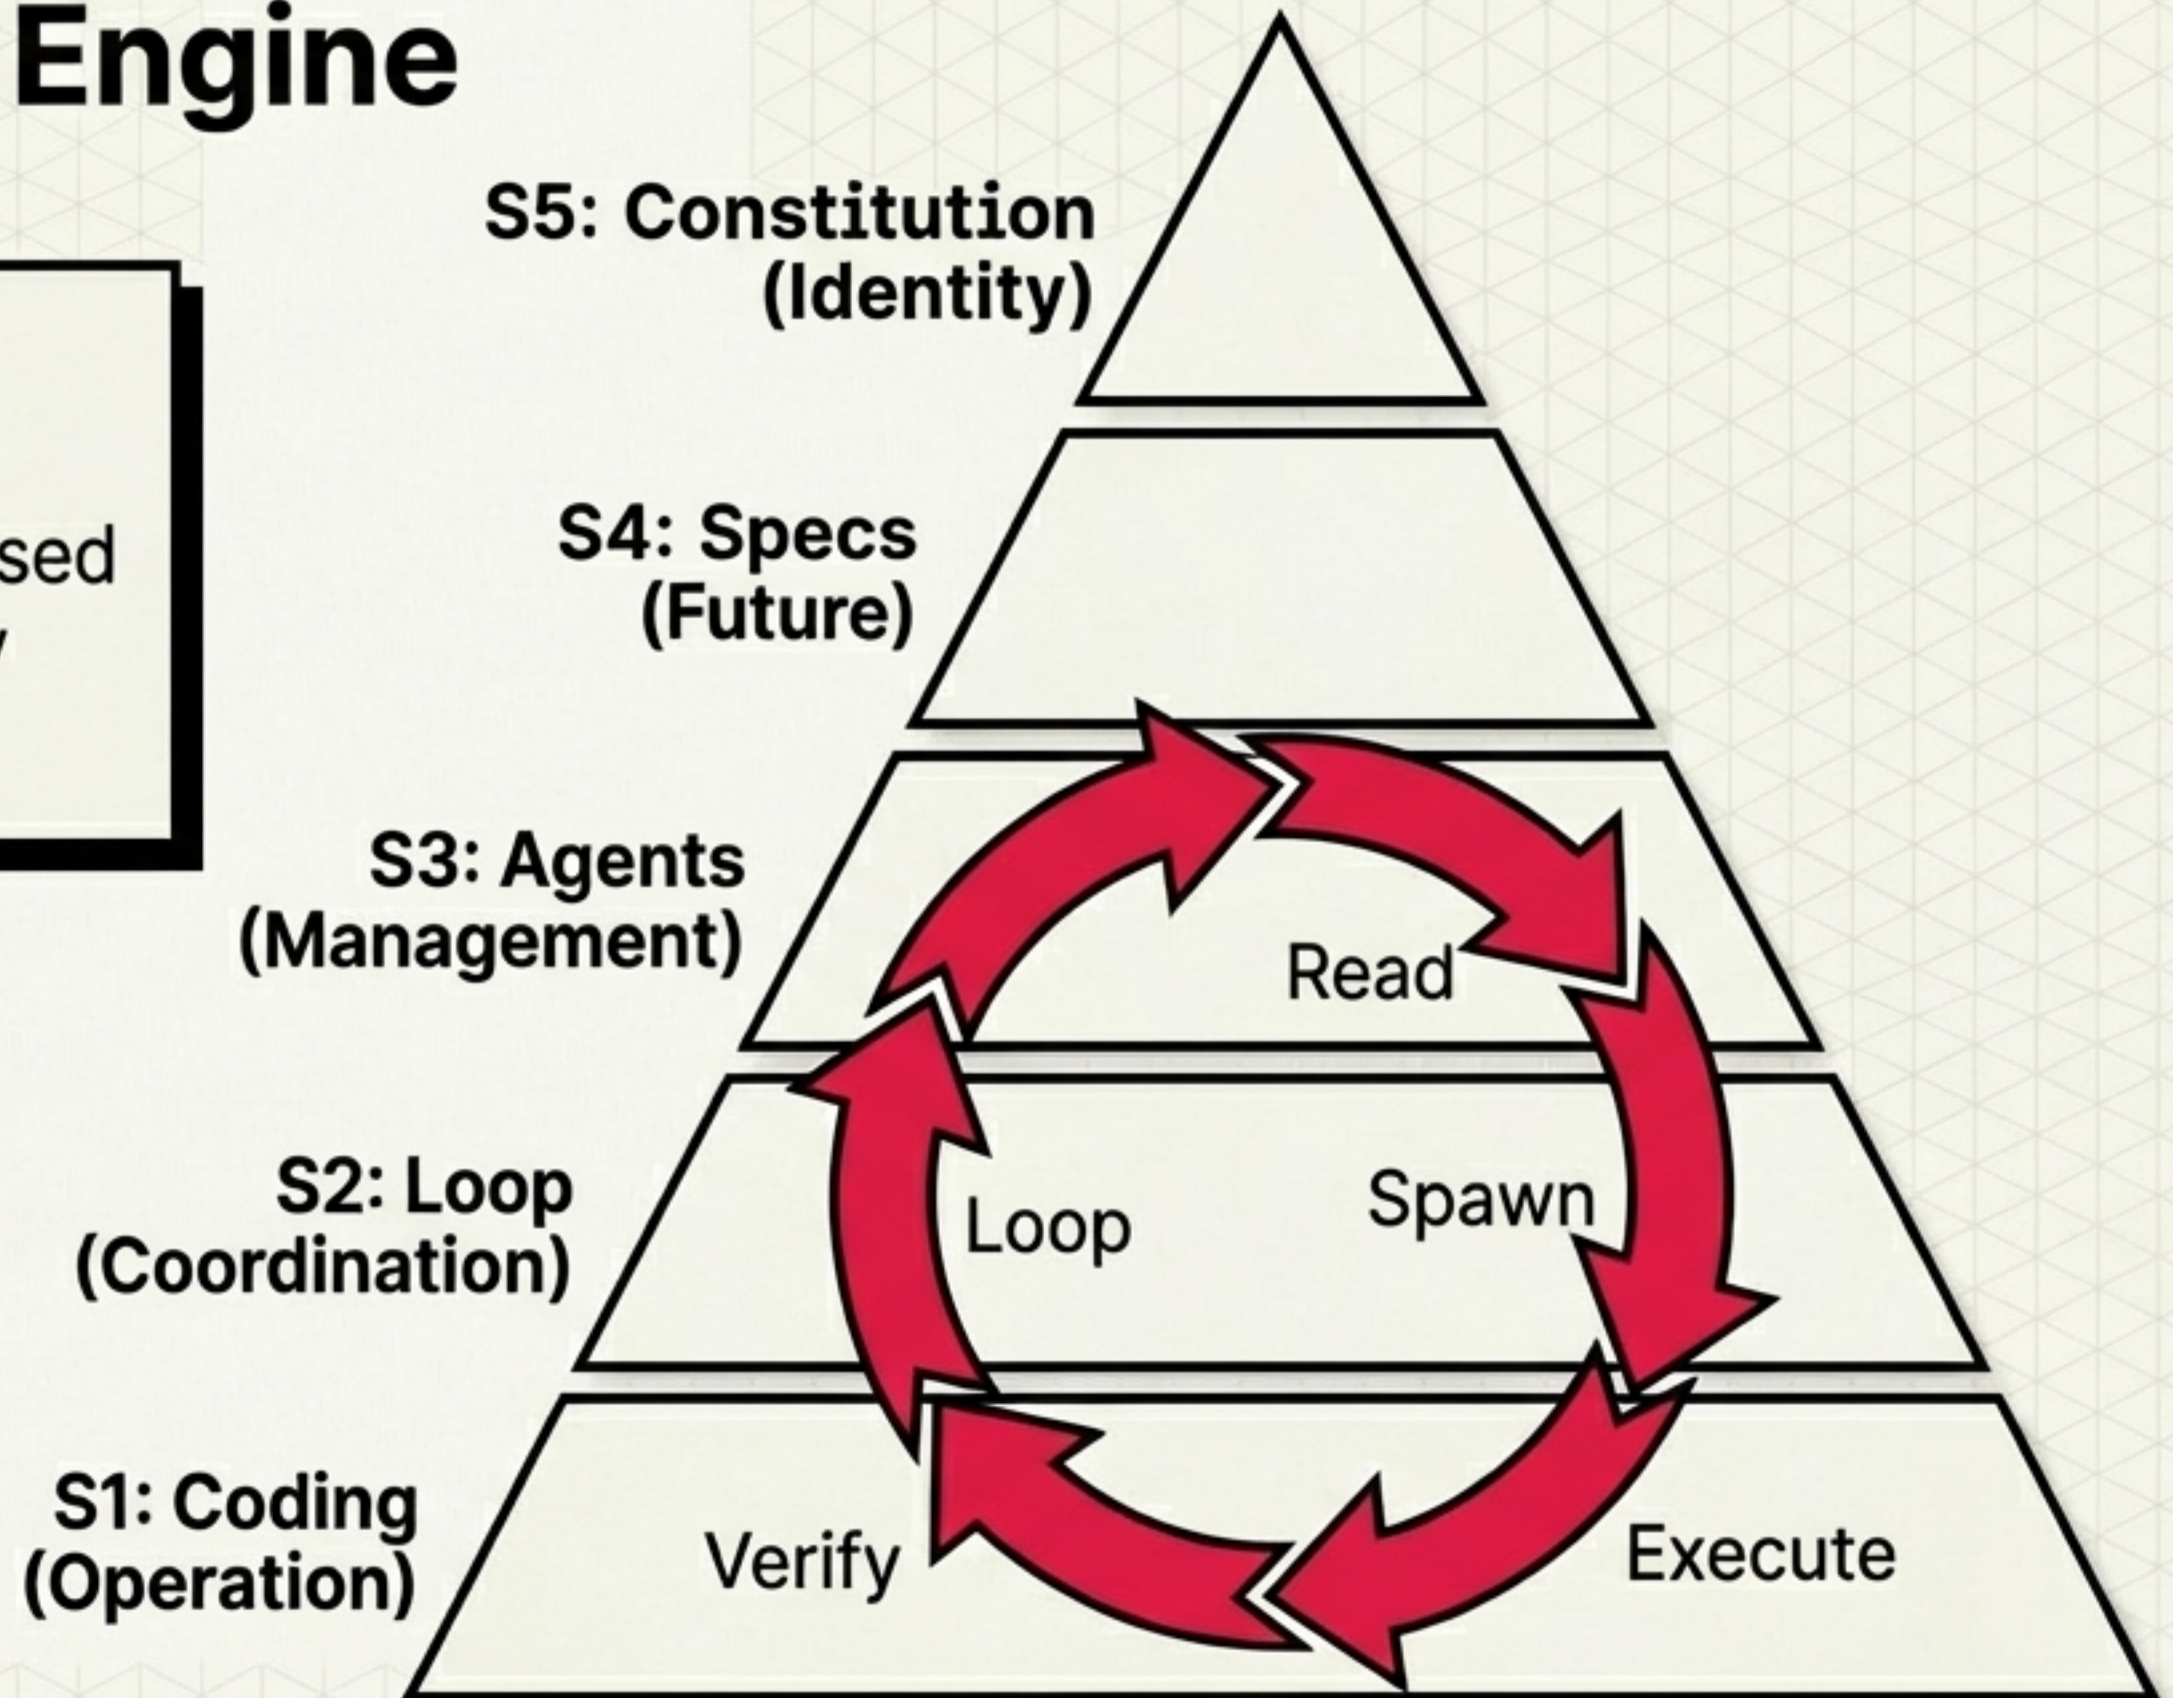

The 7-Agent Task Force

James™	DkZ PM™	Architekt™	Developer™	Reviewer™	Tester™	Dokumentar™
Role: Guardian	Role: Specs	Role: Planning	Role: Coding	Role: CodeRabbit	Role: Validation	Role: Wiki
Monitors Constitution, triggers R24 Alarm. Codes nothing.	Outputs: spec.md, User Stories, Acceptance Criteria.	Outputs: plan.md, Tech-Stack, Directory Tree.	Executes the Ralph-Loop™, writes pure code.	Checks esc() rules, DkZ CSS, features.json.	Validates against tasks.json.	Updates README, Wiki, AGENTS.md learnings.

The Ralph-Loop™ Engine

Fresh context per task. The Developer agent spawns with a blank slate, executing purely based on the **precise plan** provided by the Architekt. **No context drift.**

The R24 Alarm & The Guardian

TRIGGER CONDITIONS

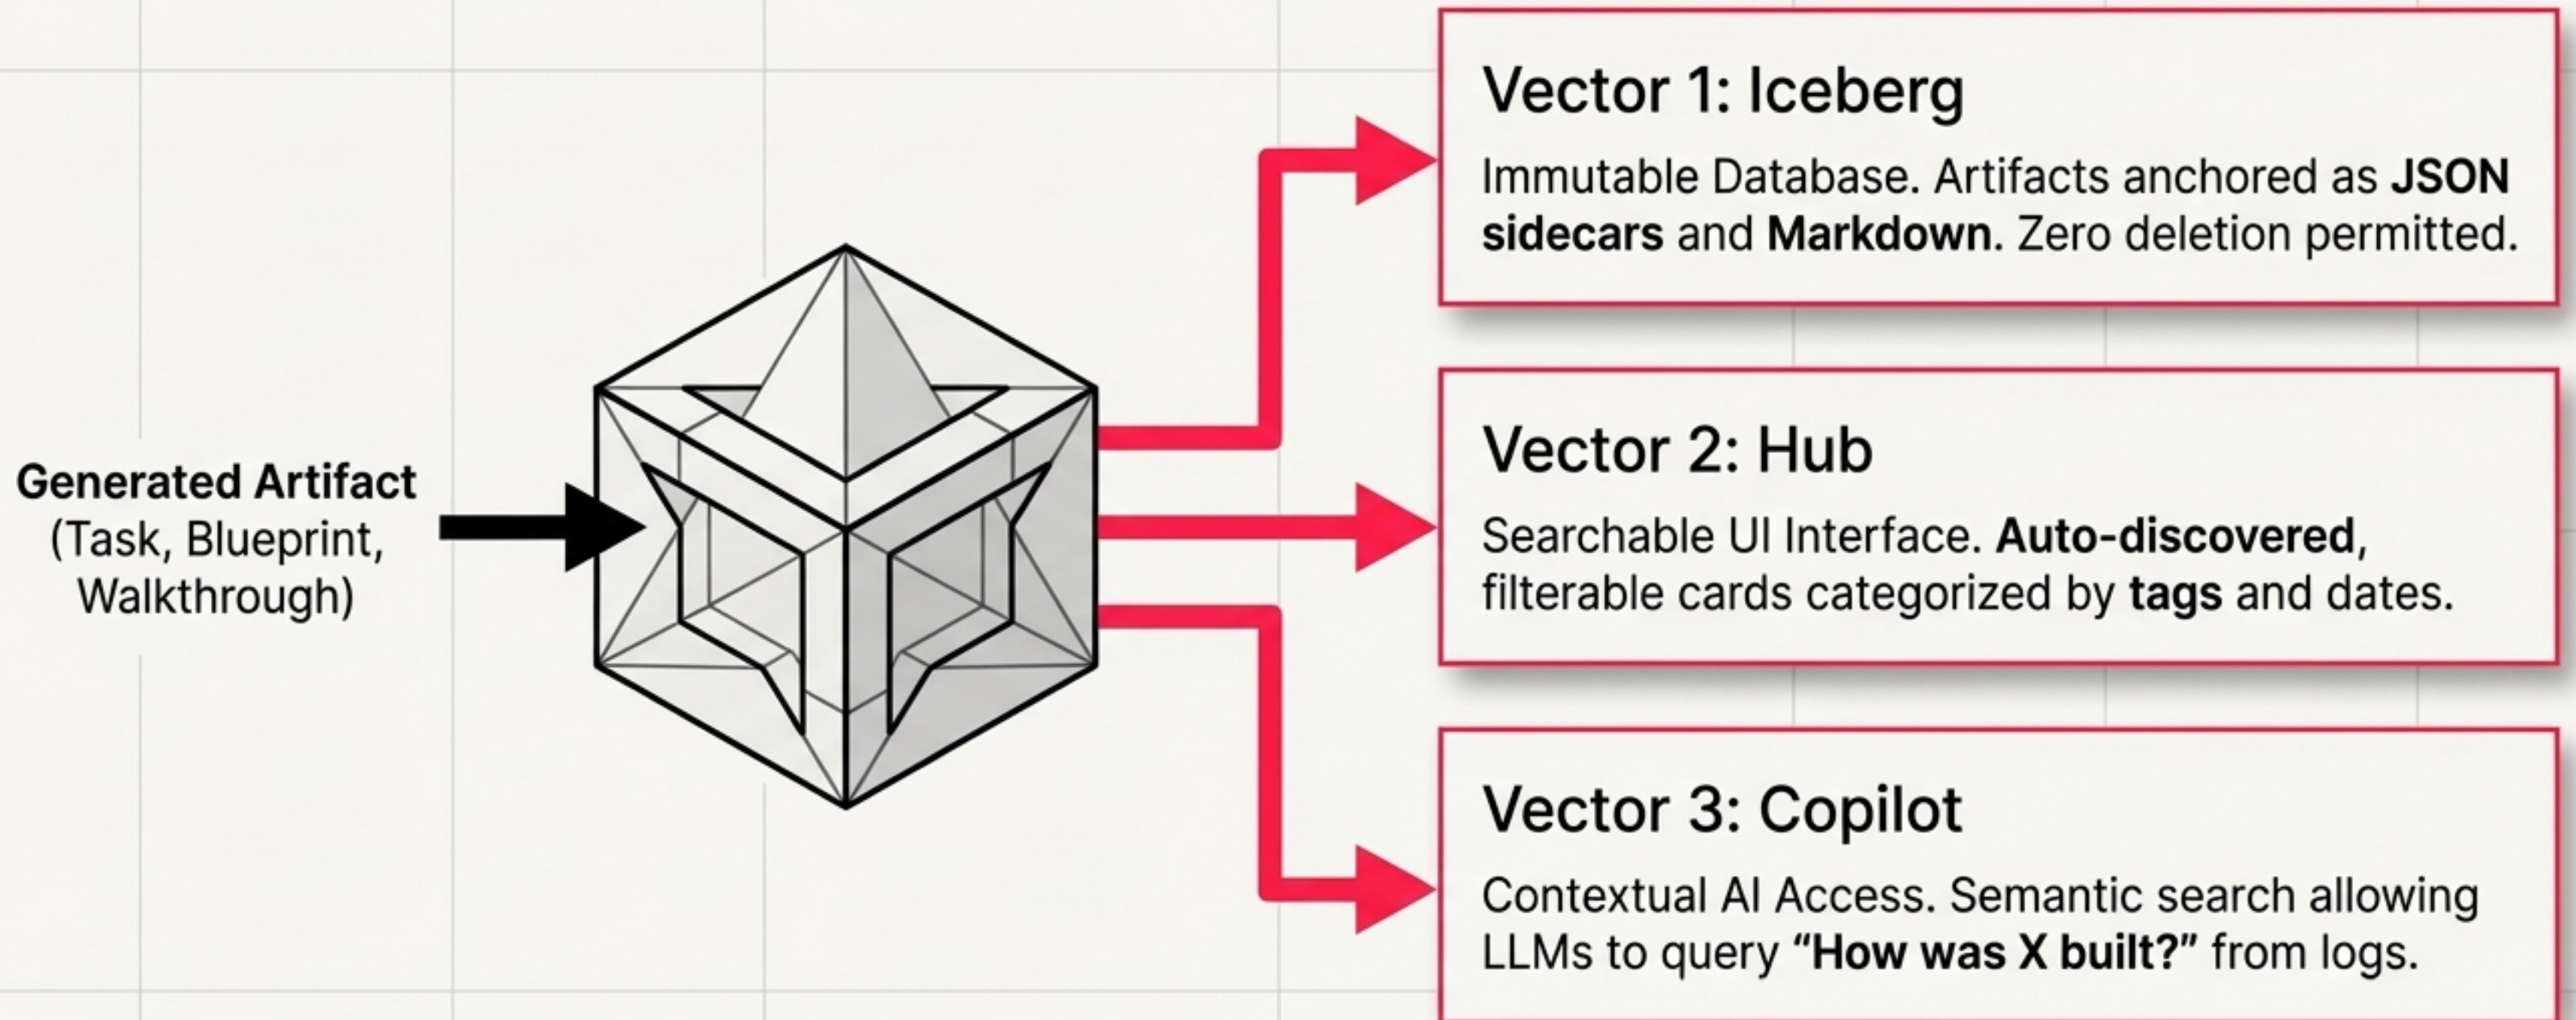

James™ monitors all operations. If any agent or user attempts to:

- Move a file to 99_ARCHIVE/
- Rename or merge directories
- Remove a module from the REGISTRY

ACTION PROTOCOL

The loop HALTS. James triggers the R24 Alarm. The action is blocked until explicit authorization is granted by Owner 777.

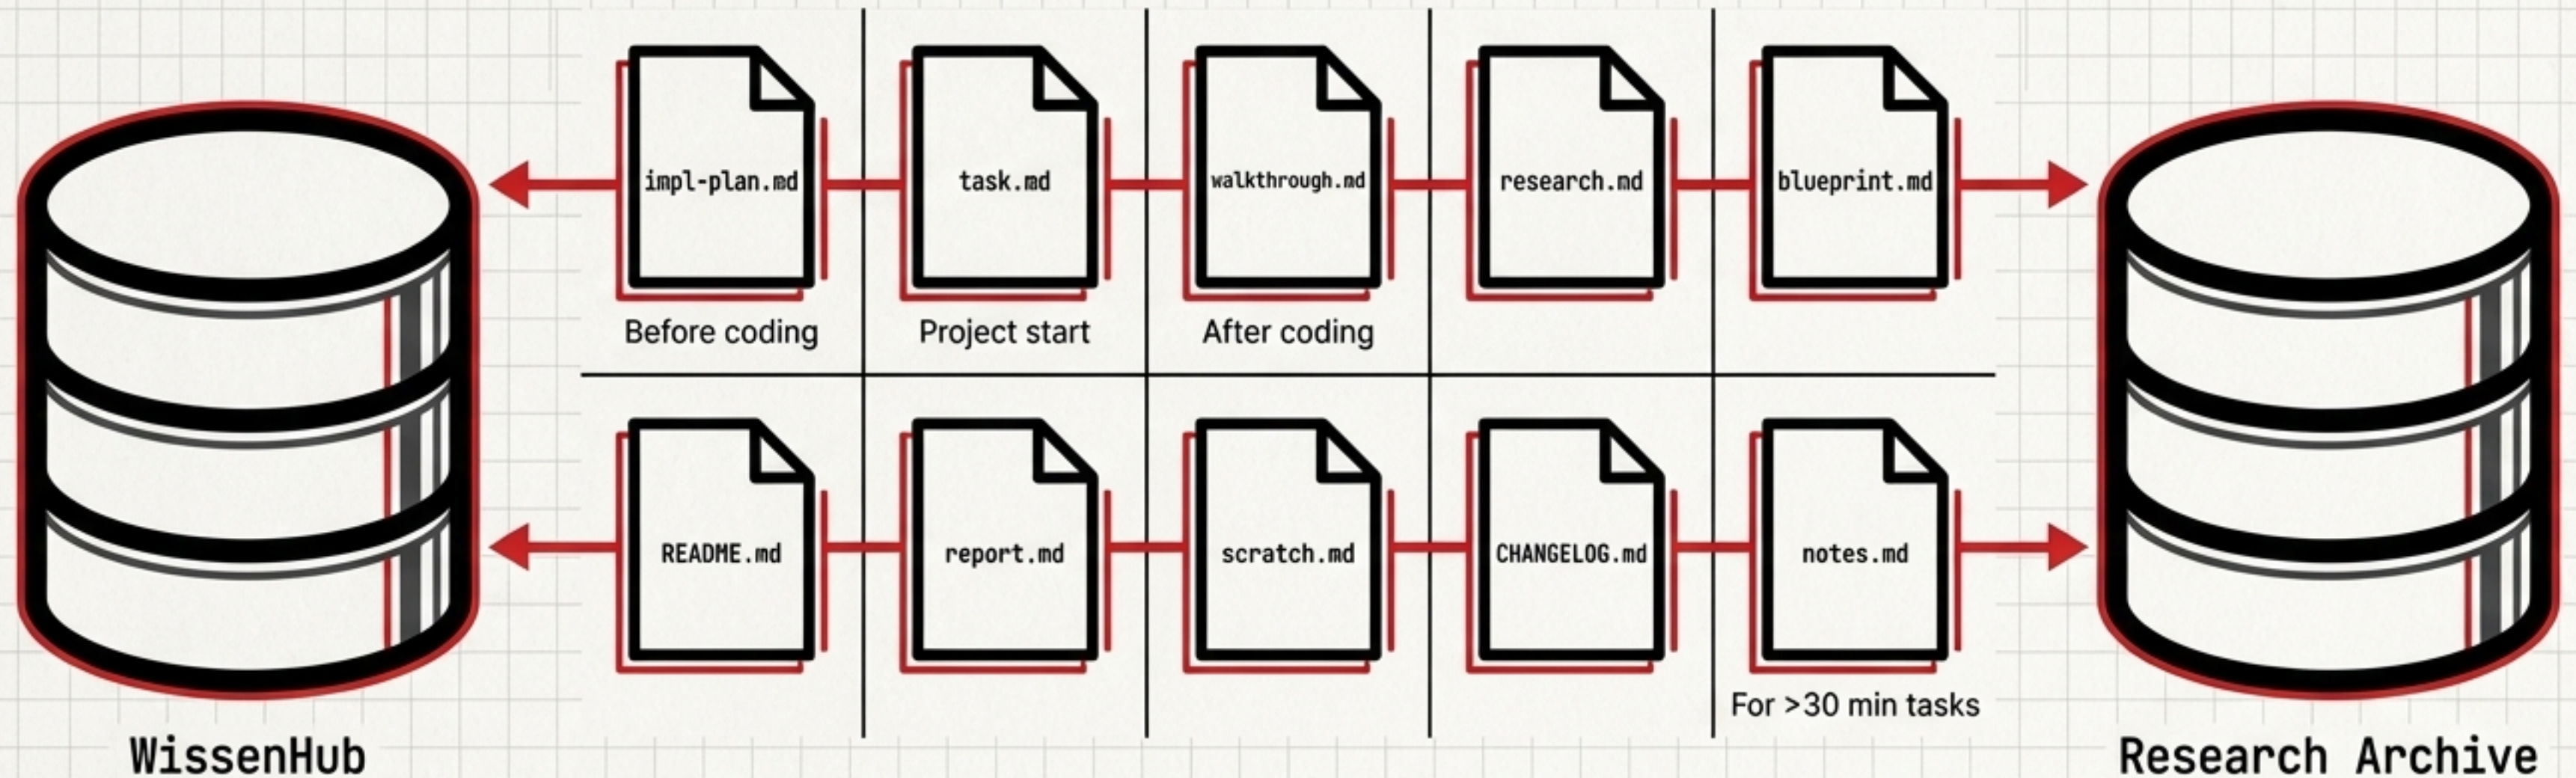

Tri-Fold Artifact Anchoring

Nothing is lost. Every piece of knowledge is triangulated for permanent retrieval.

The Dual-Database Rule (R30)

No document exists in only one place.
Dual-sync is mandatory.

Document Lifecycle & Temporal Verification

No code without a plan. No plan without proof.

	< 7 Days	Context is fresh and actively reliable.
	7-30 Days	Degraded context. System recommends verification before execution.
	> 30 Days	Stale context. Updating documentation is mandatory before proceeding.

Command Line Dominance (DkZ™ CLI)

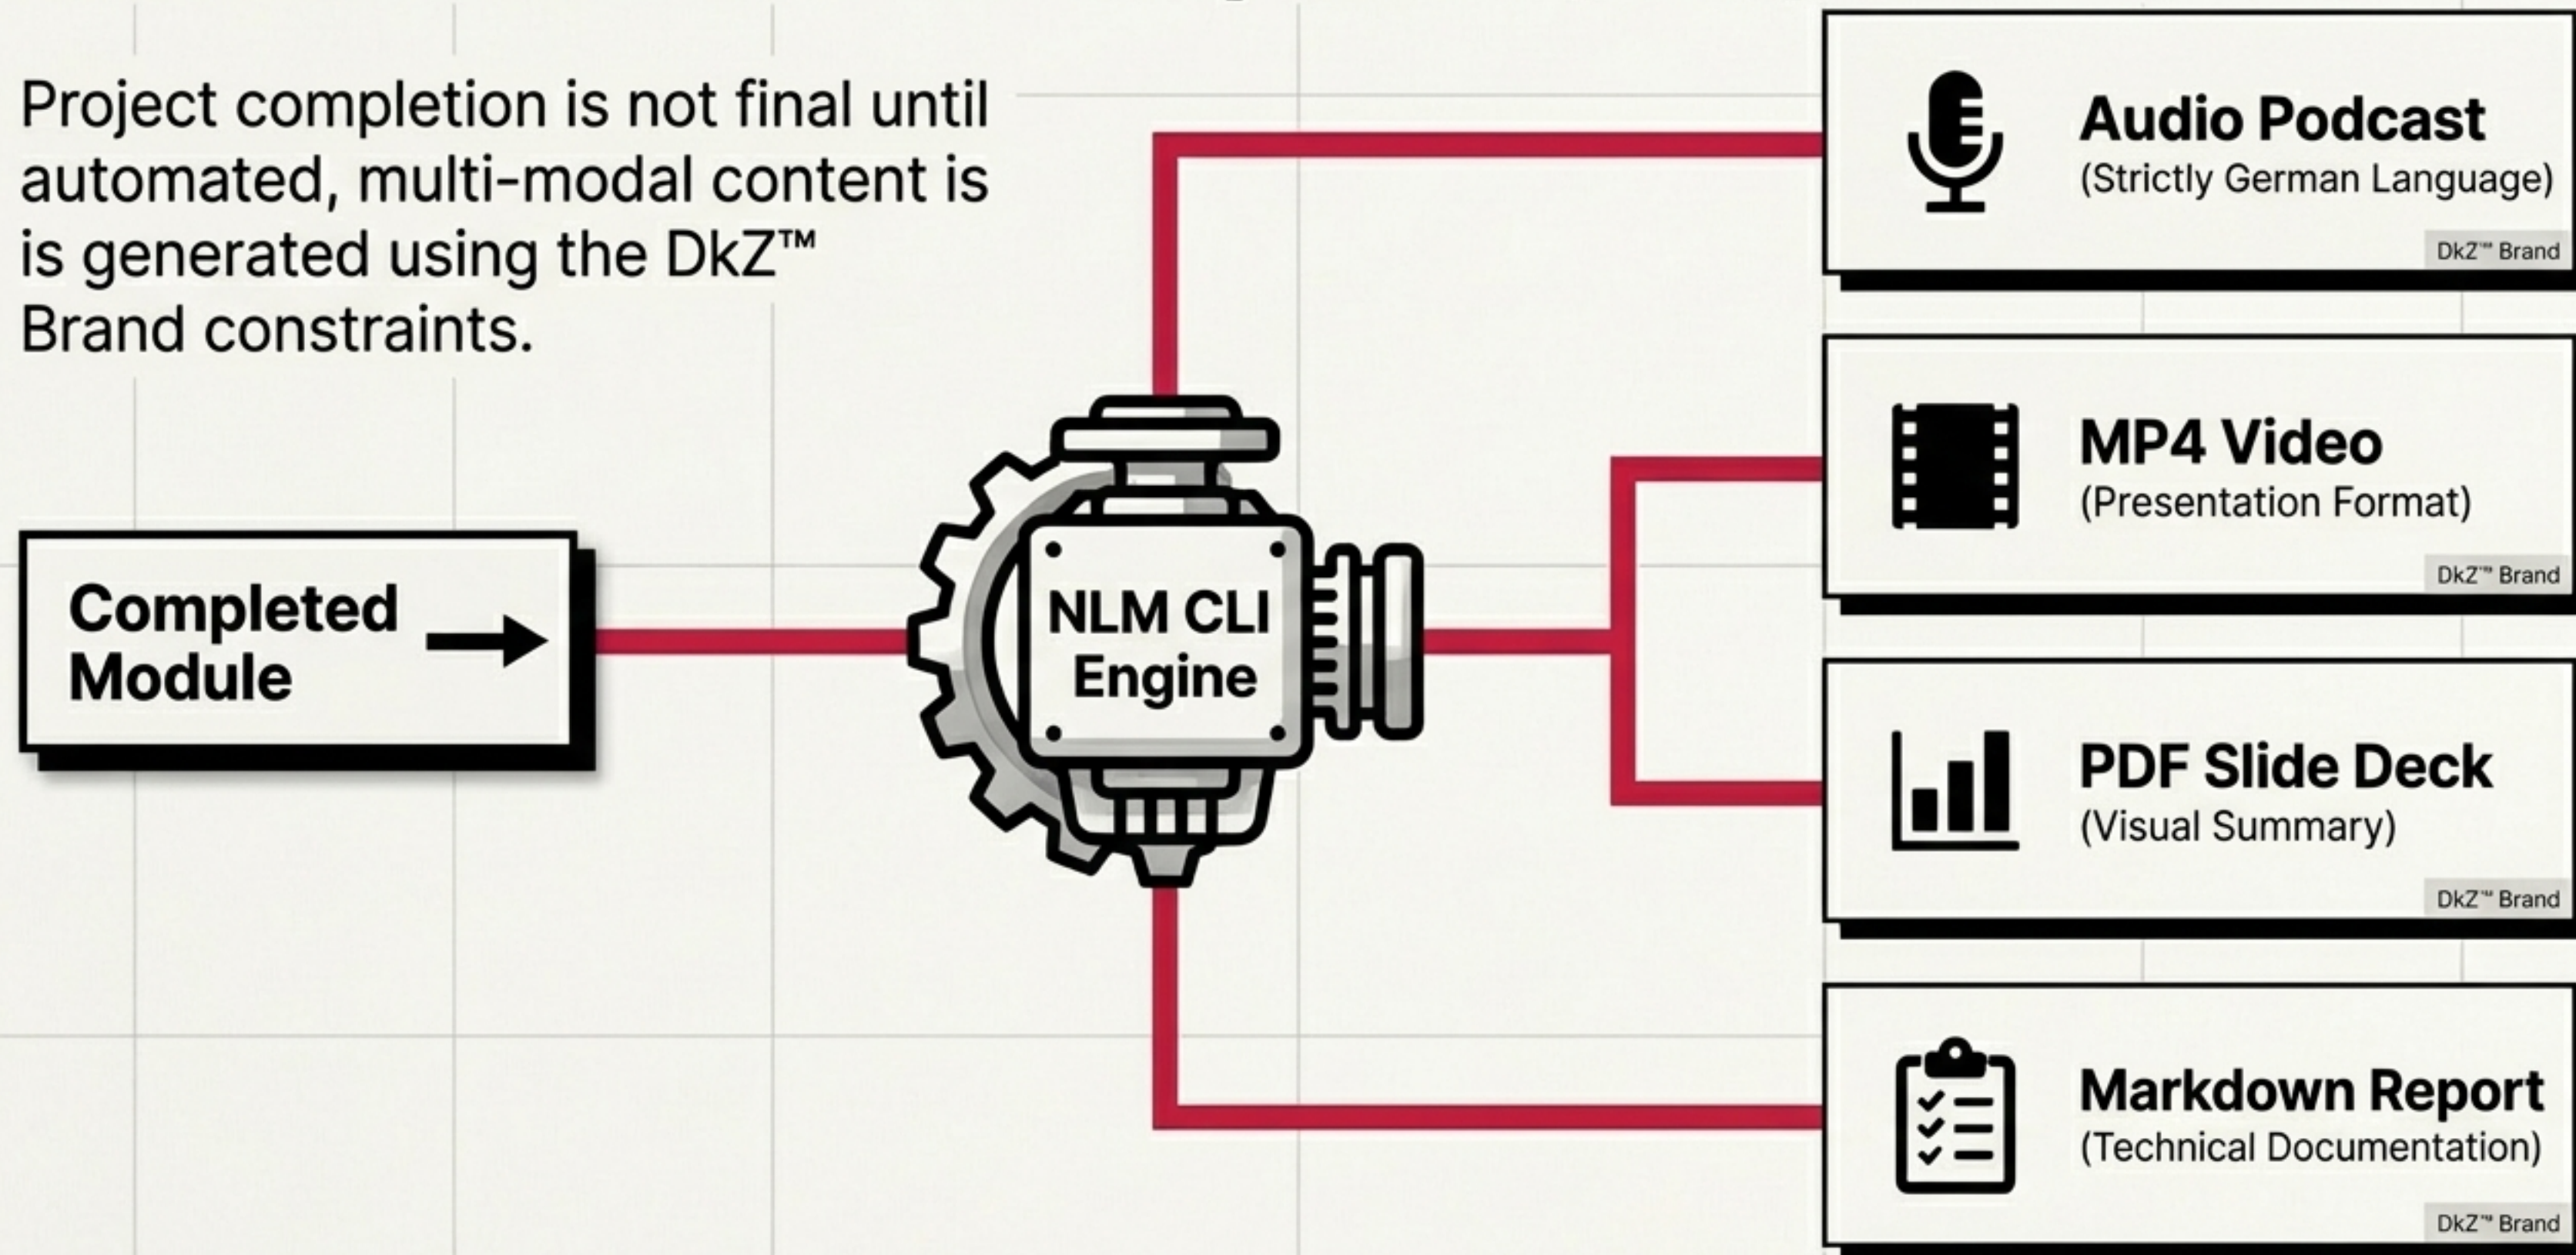

```
dkz-cli.ps1
```

dkz status	Master ecosystem overview
dkz start	Boot ONTHERUN™ MCP Server
dkz map	Reveal SYSTEM/INTERN/USER categorization
dkz wiki-sync	Aggregates 3,800+ entries across 9 sources
nlm create	Trigger multimodal content generation
dkz commit	Git add -A + commit
dkz modules	List all active ecosystem modules

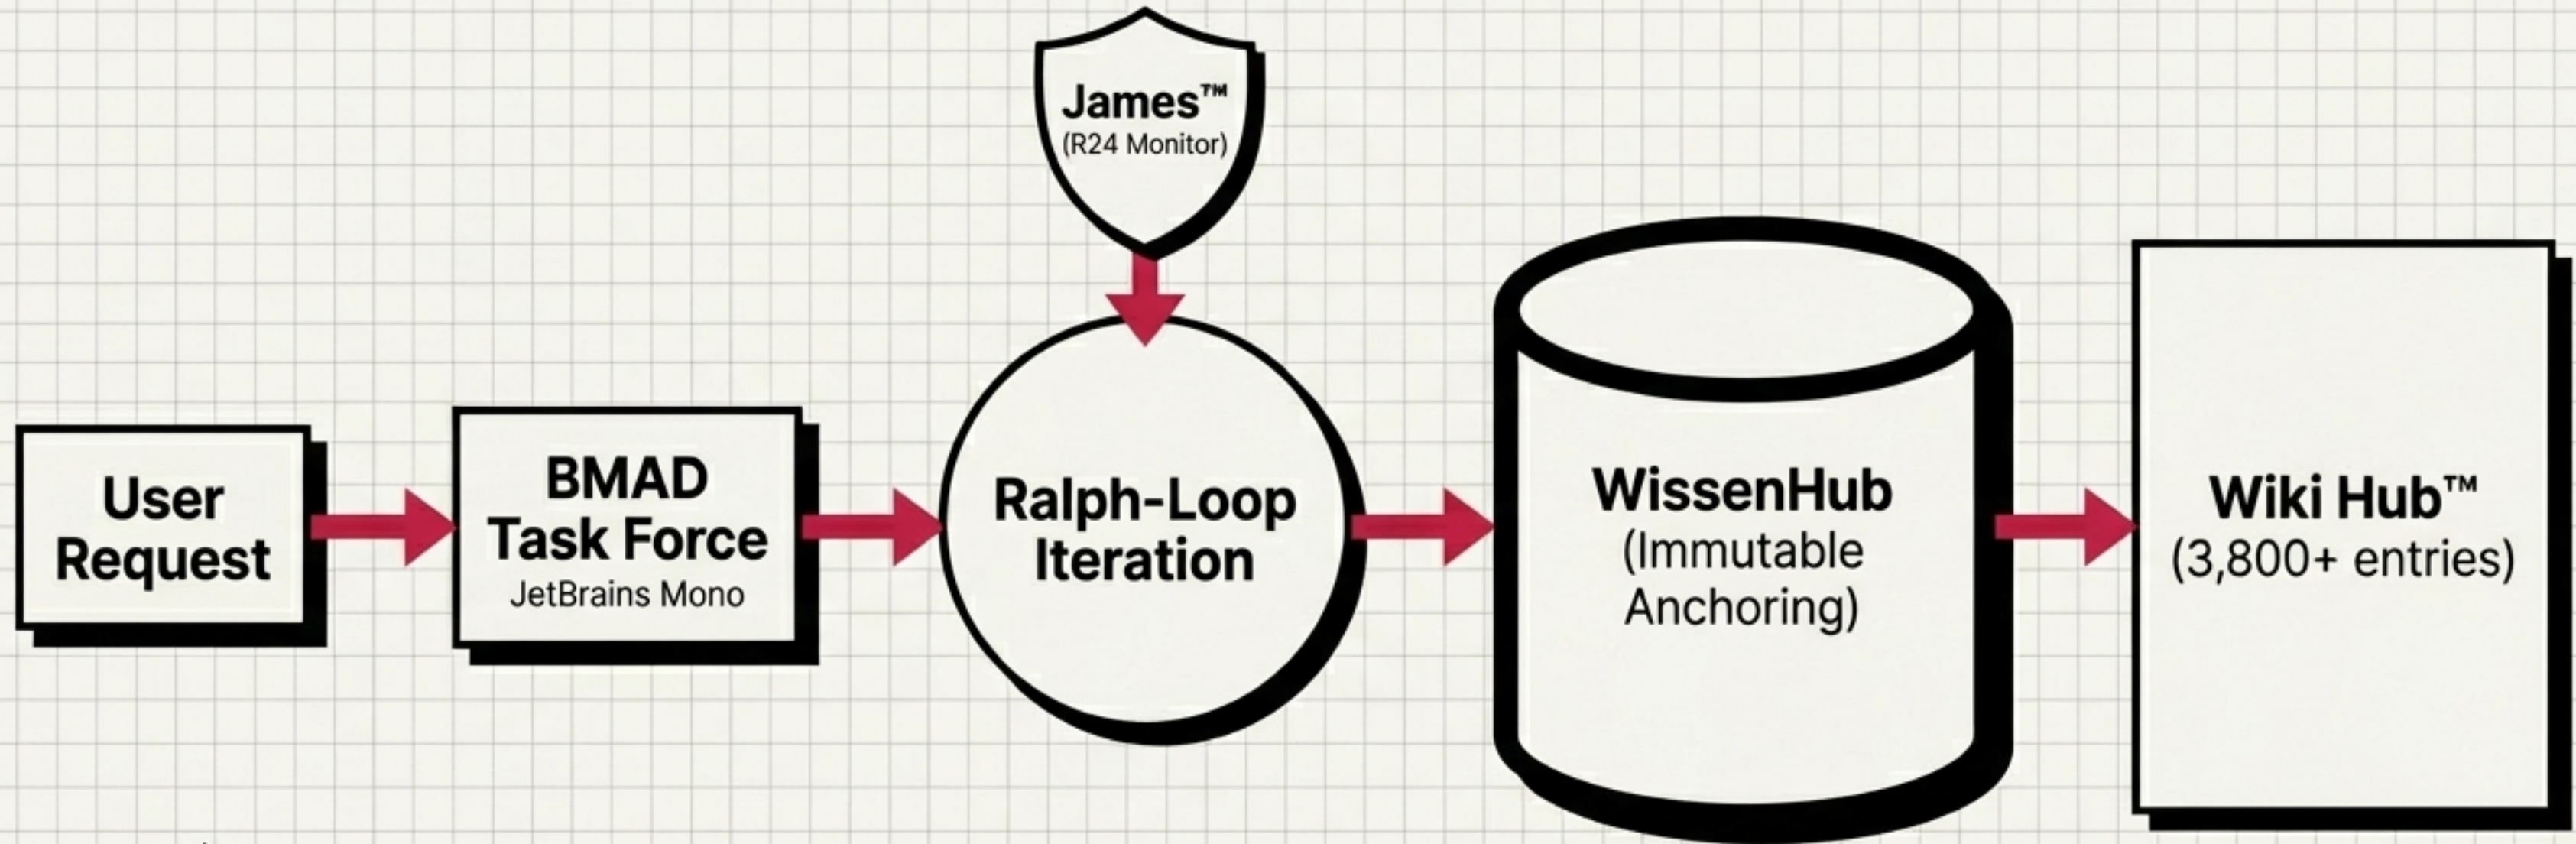

12+ universal commands to control the entire ecosystem architecture without relying on graphical dashboards.

NotebookLM Content Pipeline (R31)

Project completion is not final until automated, multi-modal content is generated using the DkZ™ Brand constraints.

The Immutable Knowledge Engine

DEVKITZ™ is not merely a coding environment. It is a **self-documenting, eternally archiving, continuously improving cybernetic memory system**. Code is just a byproduct; **perfect system knowledge** is the ultimate output.

Session Departure Protocol

- [✓] Did you read CLAUDE.md / GEMINI.md?**
- [✓] Is features.json perfectly synced with your changes?**
- [✓] Are all Git commits logged cleanly?**
- [✓] Are your artifacts anchored in the Tri-Fold system?**
- [✓] Have you triggered the wiki-sync?**

ACKNOWLEDGE. EXECUTE. DISCONNECT.
