DEVKITZ Blueprint

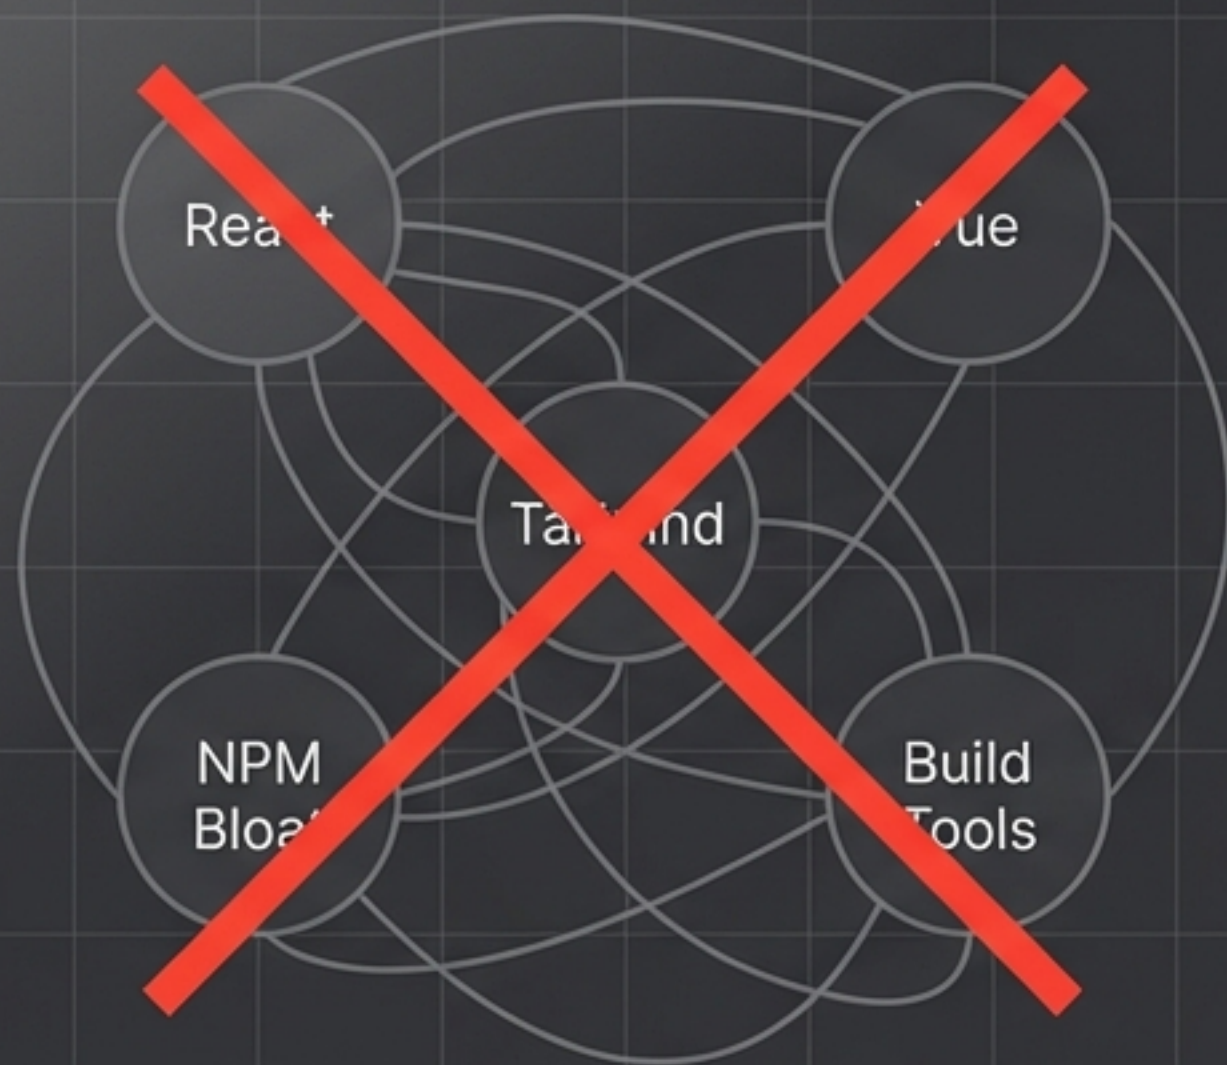

The Vanilla Developer Ecosystem

+ POS: 8x508 Y=40% >

[SCALE: 1:1]

Build. Ship. Scale. — Pure Vanilla.

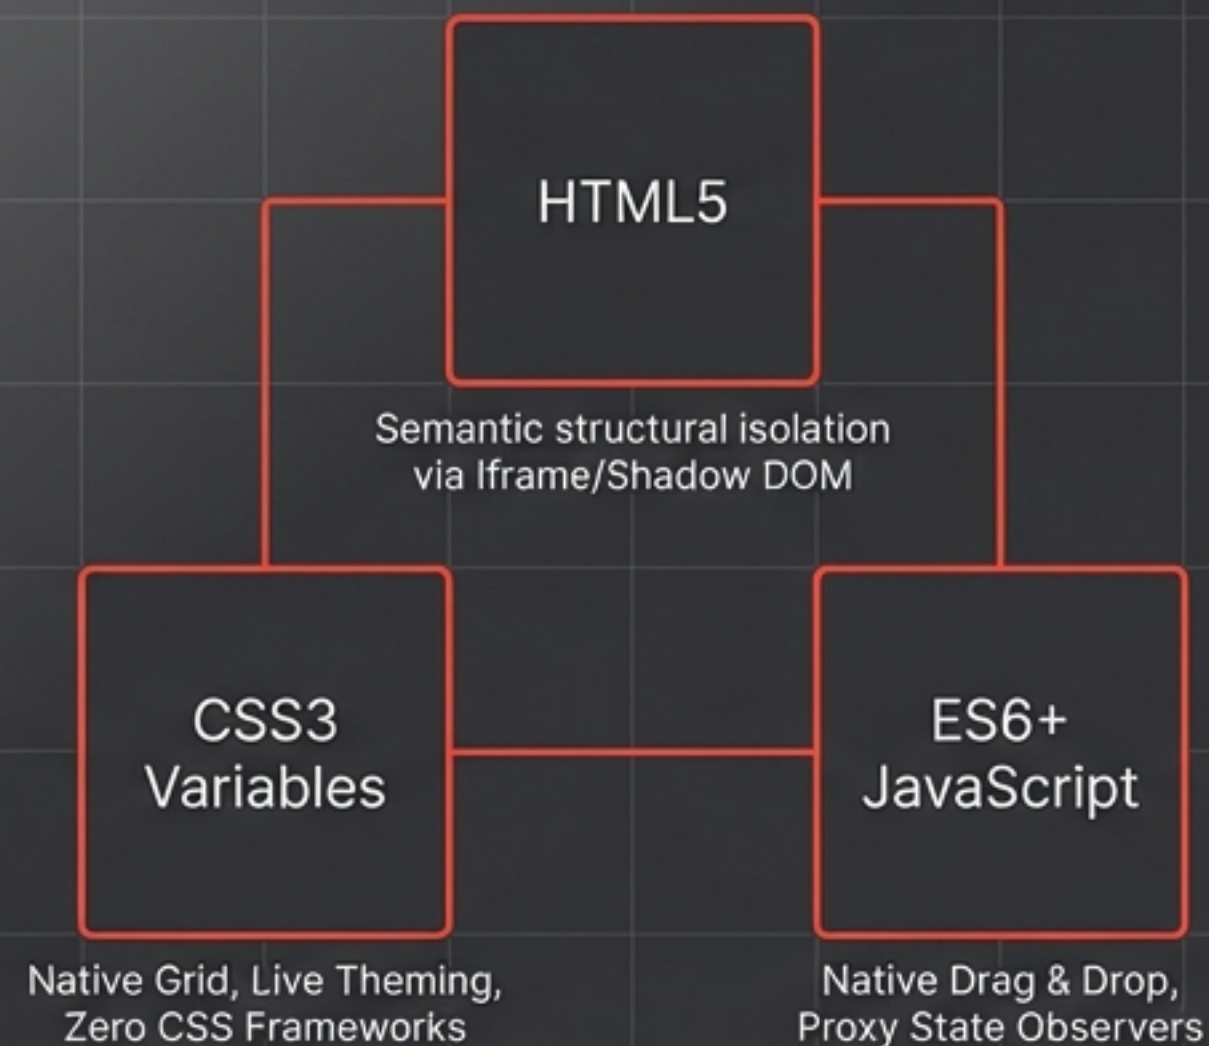

The Problem

VERSION: 1.0.0 [OBSOLETE]

VERSION: 1.0.0 [OBSOLETE]

The DkZ DNA

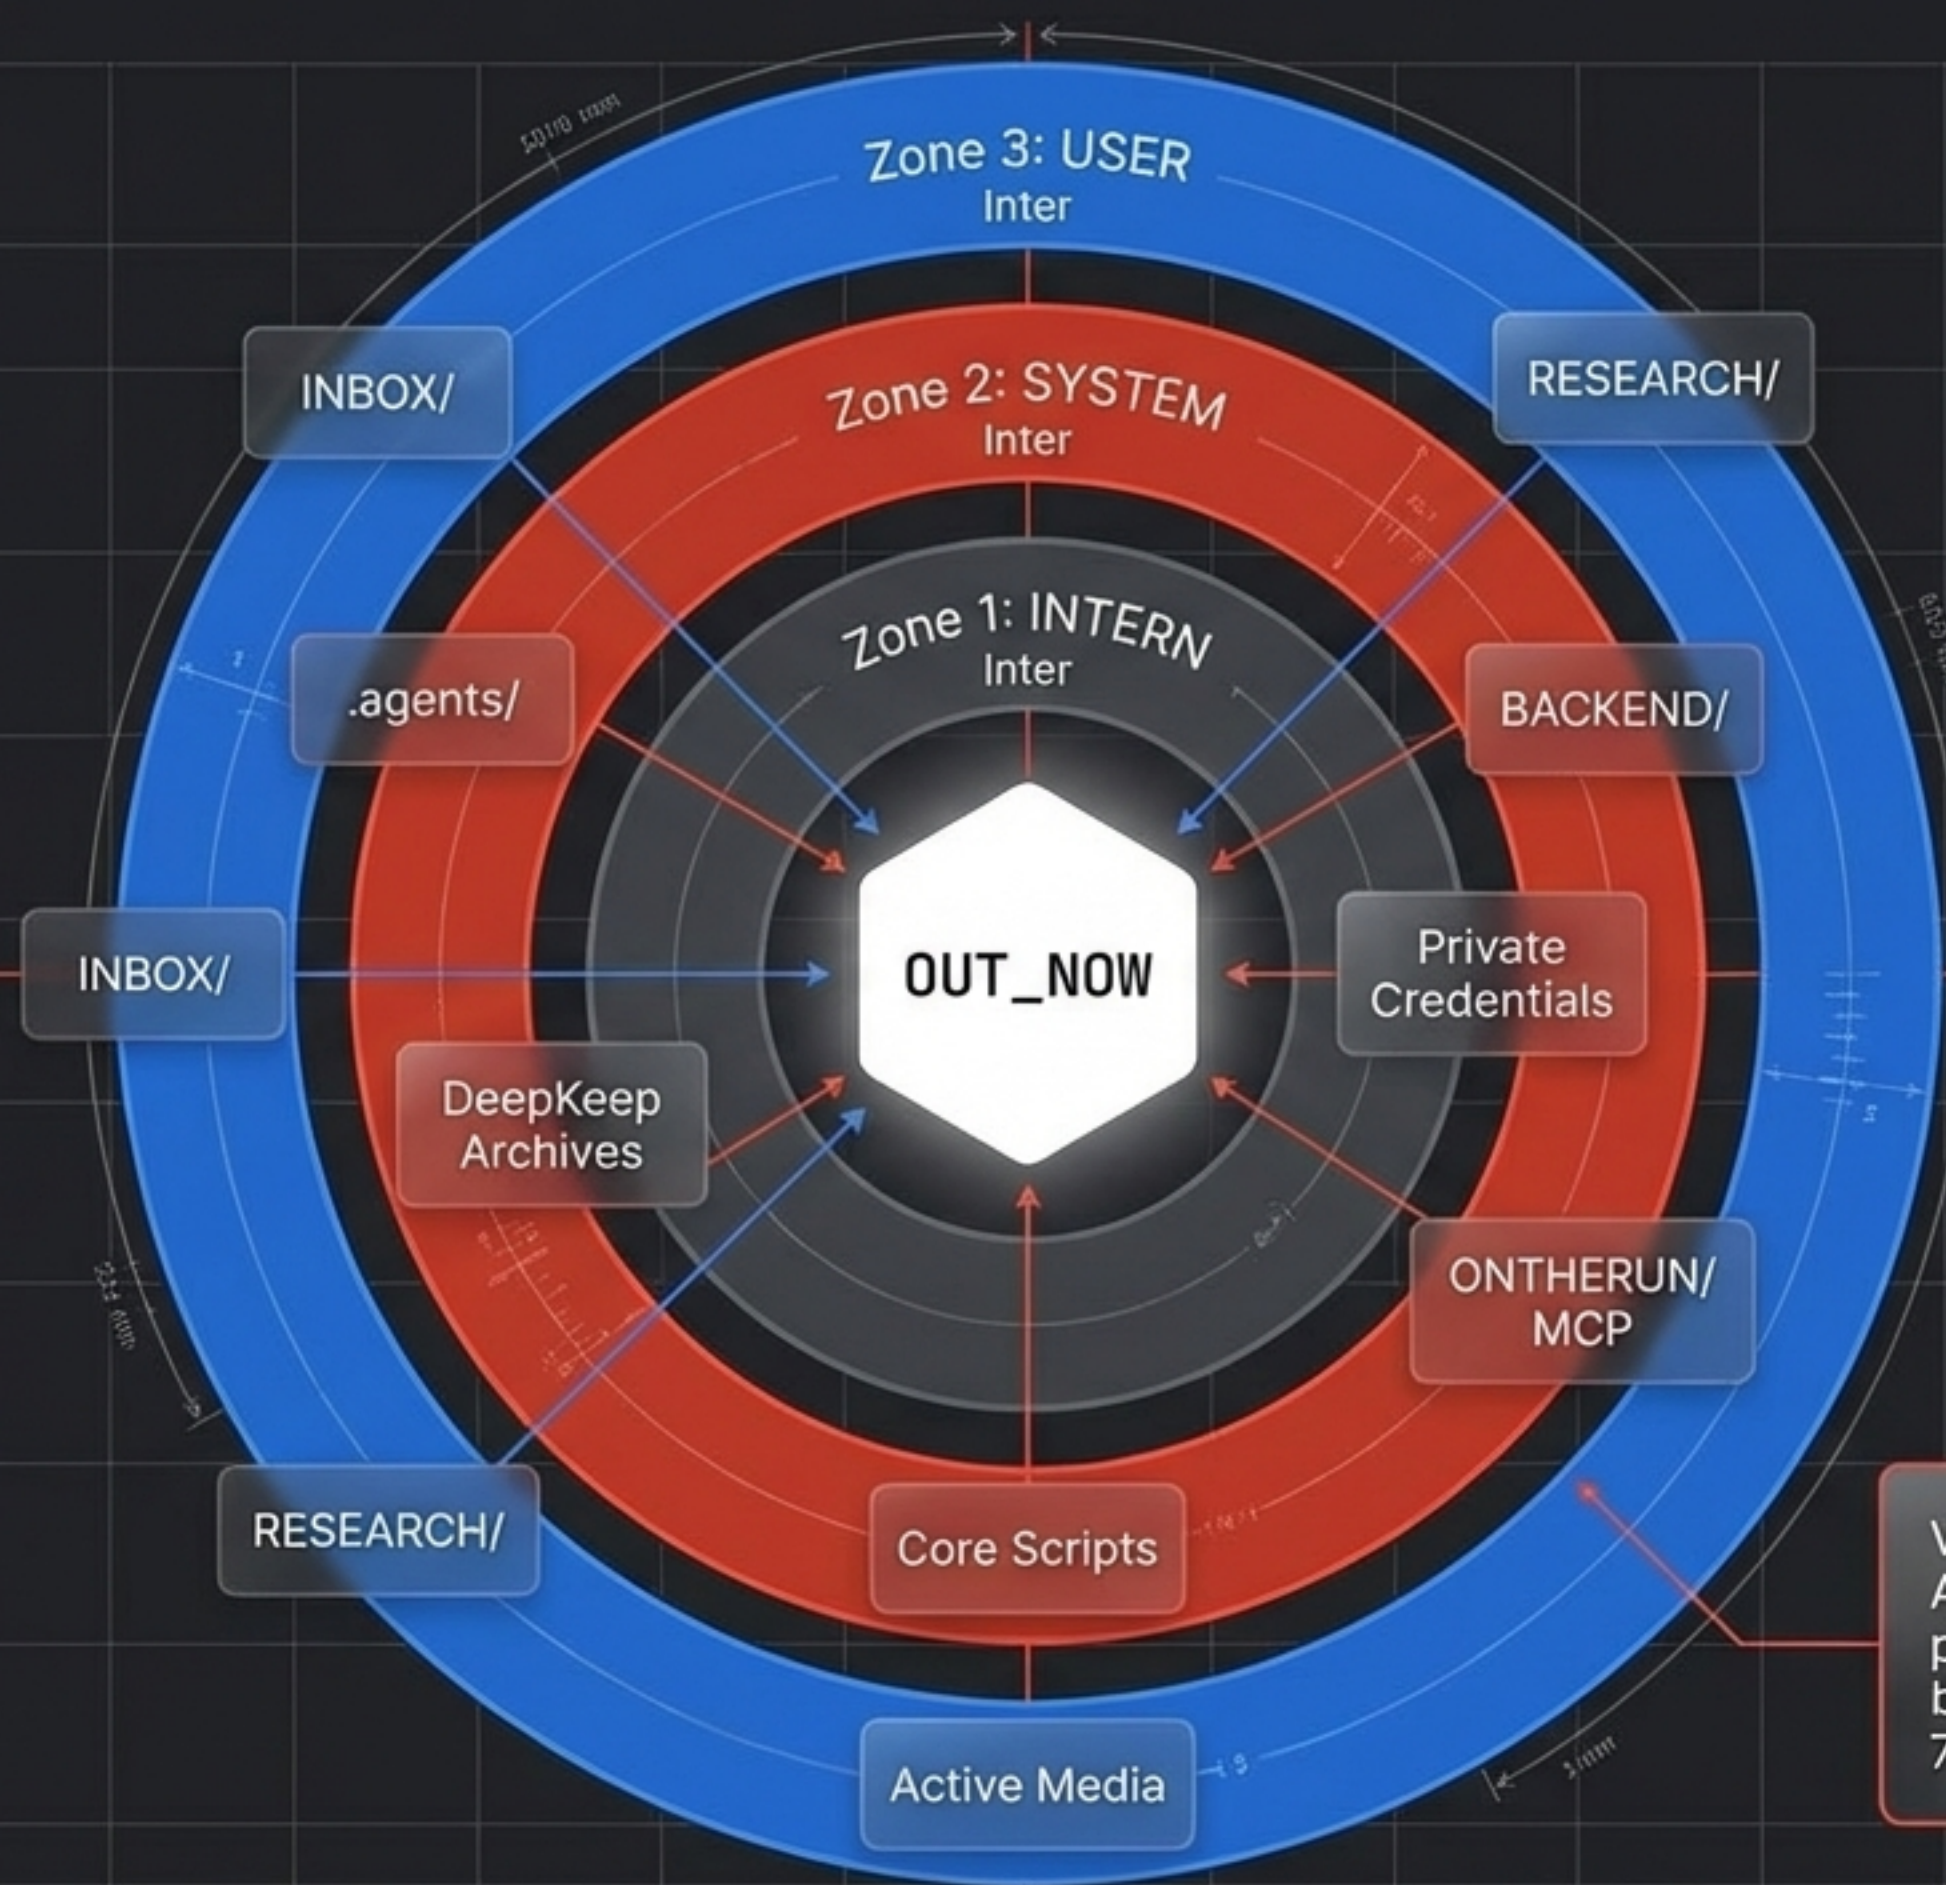

VERSION: 2.0.0 [ACTIVE]

VERSION: 2.0.0 [ACTIVE]

Offline-First Mentality. localStorage + JSON AST as the Single Source of Truth.
Simplicity is the ultimate sophistication.

STORAGE: LOCAL

FORMAT: JSON_AST

Virtual Tagging System:
Assets are tagged, never
physically moved, preventing
broken references across the
7,708+ file ecosystem.

Architecture Mandate: Every module operates independently, communicates strictly via `localStorage`, utilizes the unified `dkz-navbar.js` API for notes, and rigidly adheres to the DkZ Theme.

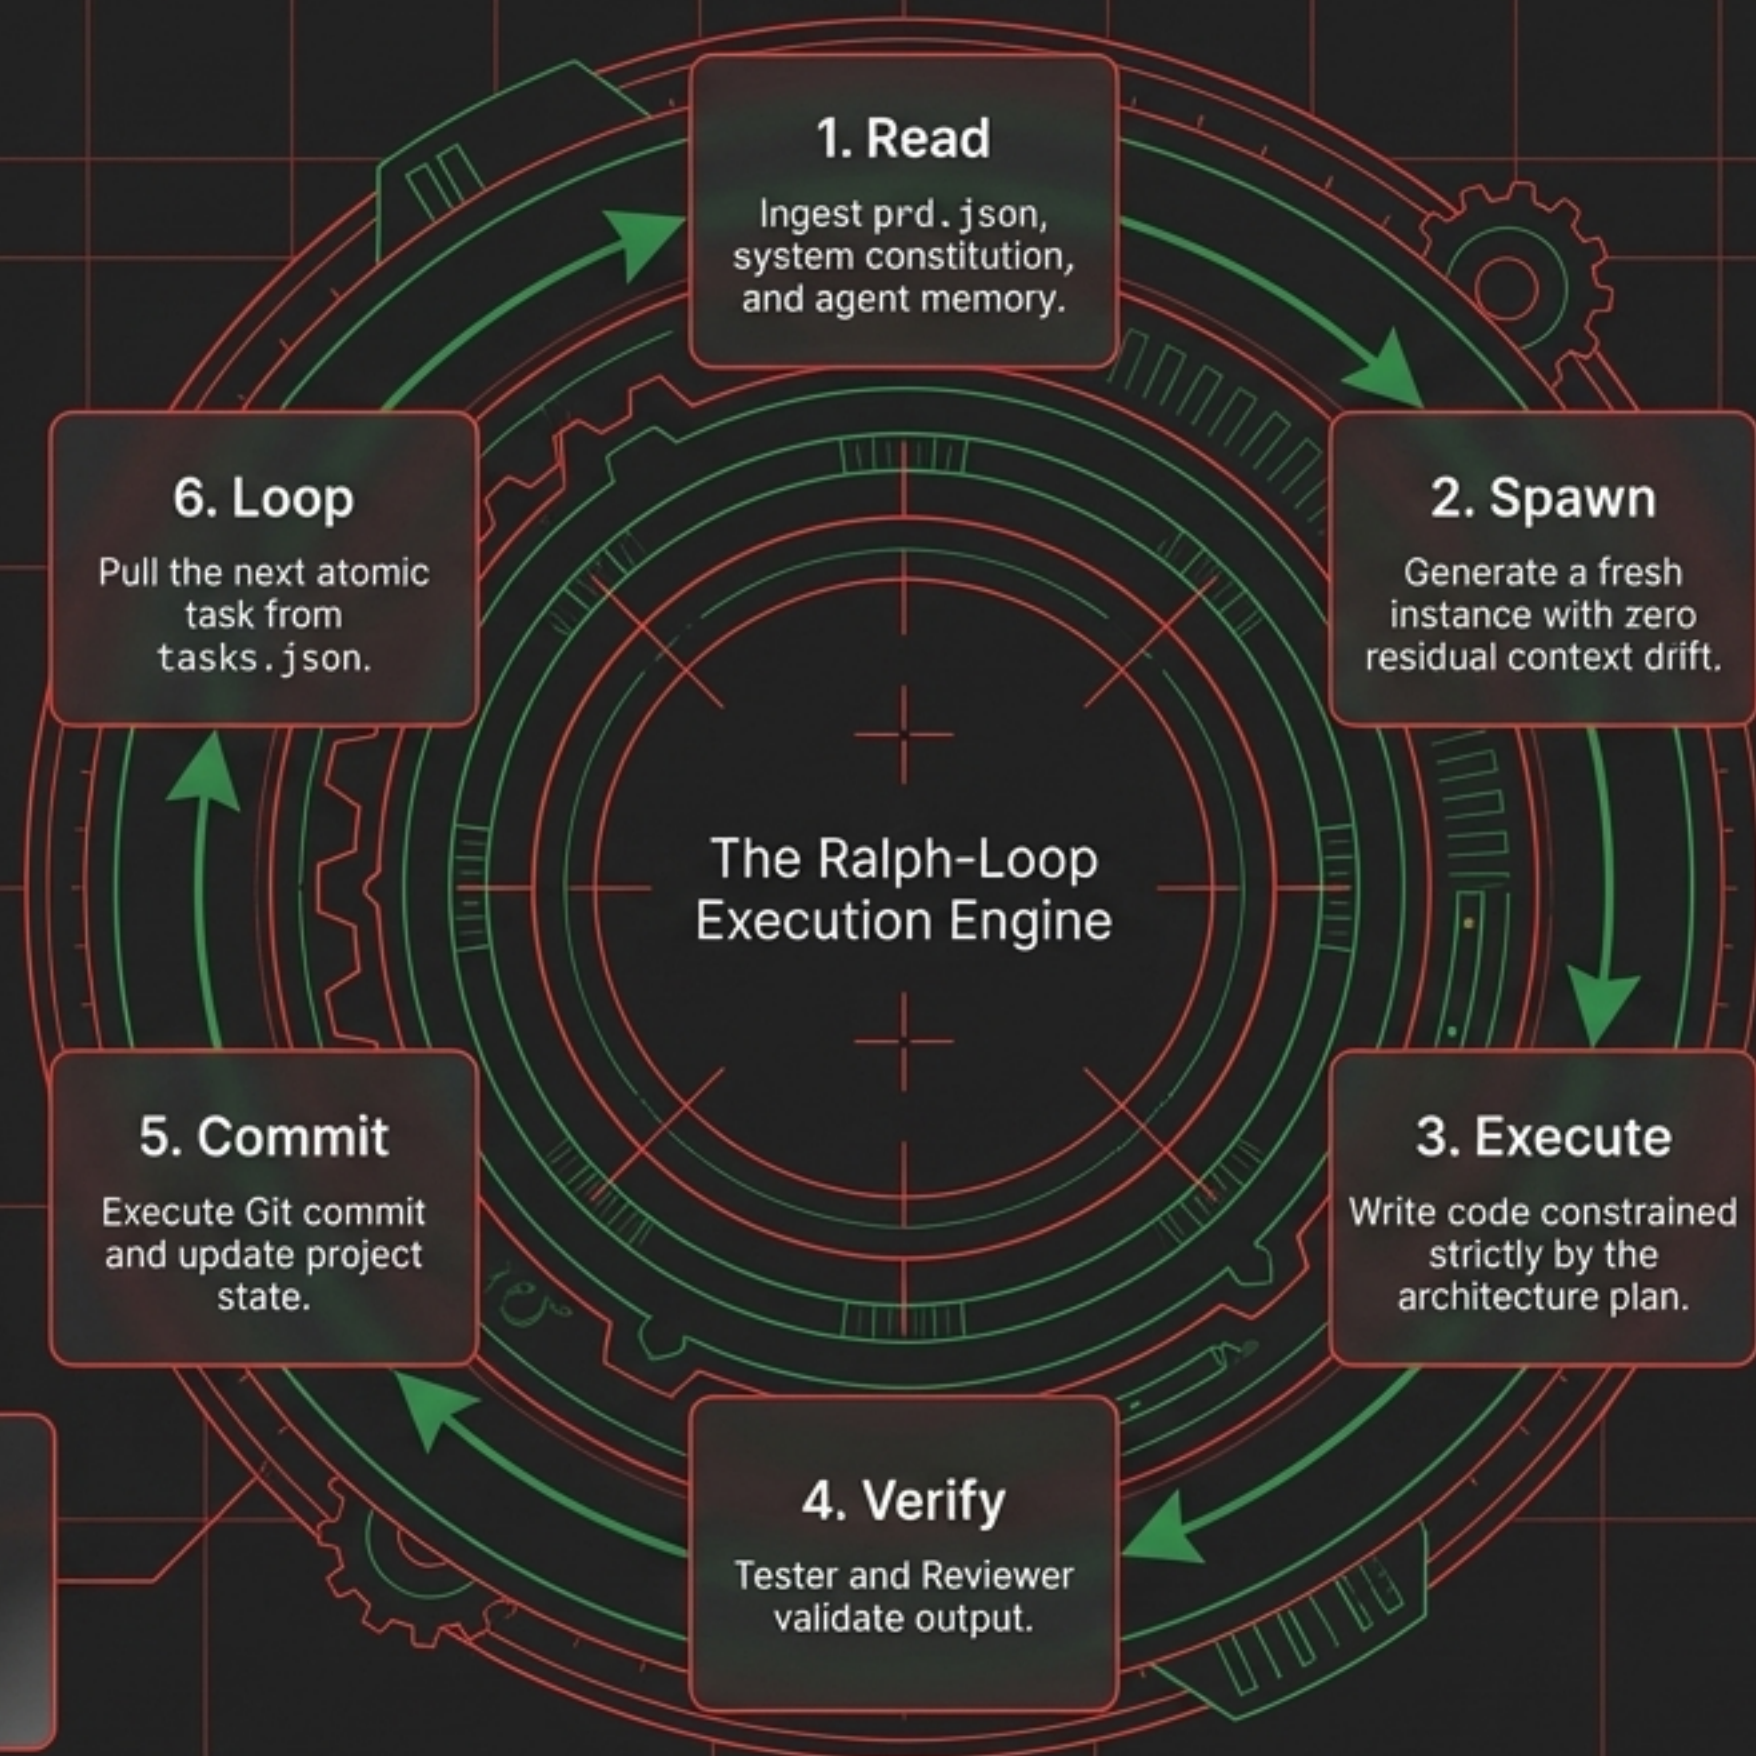

R23: The Fallback Law.

Every high-speed Go API must possess a Python replica fallback.

If Go fails, the Python server mirrors all endpoints 1:1 automatically.

BMAD Strategy: Blueprint -> Mapping -> Analysis -> Design. Specialization prevents AI hallucination.

Built on Stafford Beer's Viable System Model (VSM System 2).

Every task receives fresh, heavily filtered context. Zero context drift. Zero memory degradation.

344+ Templates
(35 Categories)

Unified
Prompt
Storage

[gen]: Timeline-based builders.

[arc]: Archive viewers and export.

[eng]: Deep engineering tools.

[chat]: AI conversations.

[loop]: Autonomous workflow prompts.

[import]: External JSON/CSV data.

The dkz-prompt-hub.js architecture ensures James only loads task-relevant knowledge, keeping AI razor-sharp. Legacy keys are seamlessly mapped, honoring the 'No Deletion' protocol.

The Triple Anchor Matrix (Rule R27)

Generated Artifact
(e.g. Walkthrough)

Apache Iceberg

Immutable JSON sidecars
and catalog manifests.
Never deleted.
(The Knowledge Lake).

The UI Hub

Searchable, filterable
interface for human retrieval.
(Searchable Surface).

The Copilot

Embedded context for LLM
access, enabling dynamic
retrieval.
(AI Context).

Rule 1: Never Delete. Only Archive.

R24 Alarm Protocol

If any process attempts to delete a file, bypass the registry, or empty a directory, James triggers the R24 System Alarm.

Execution is blocked pending explicit human authorization.

Document Decay Traffic Light

< 7 Days
JetBrains Mono

Current & Valid.

7-30 Days
JetBrains Mono

Degraded. Review
Recommended.

> 30 Days
JetBrains Mono

Obsolete. Mandatory Update
Required before execution.

The Bridge: DkZ Hub Chrome Extension

Exception Granted (Rule R0)

The only approved use of React 18 & Tailwind 3, optimized for Chrome V3 Manifest constraints.

AI Toolkit Injection

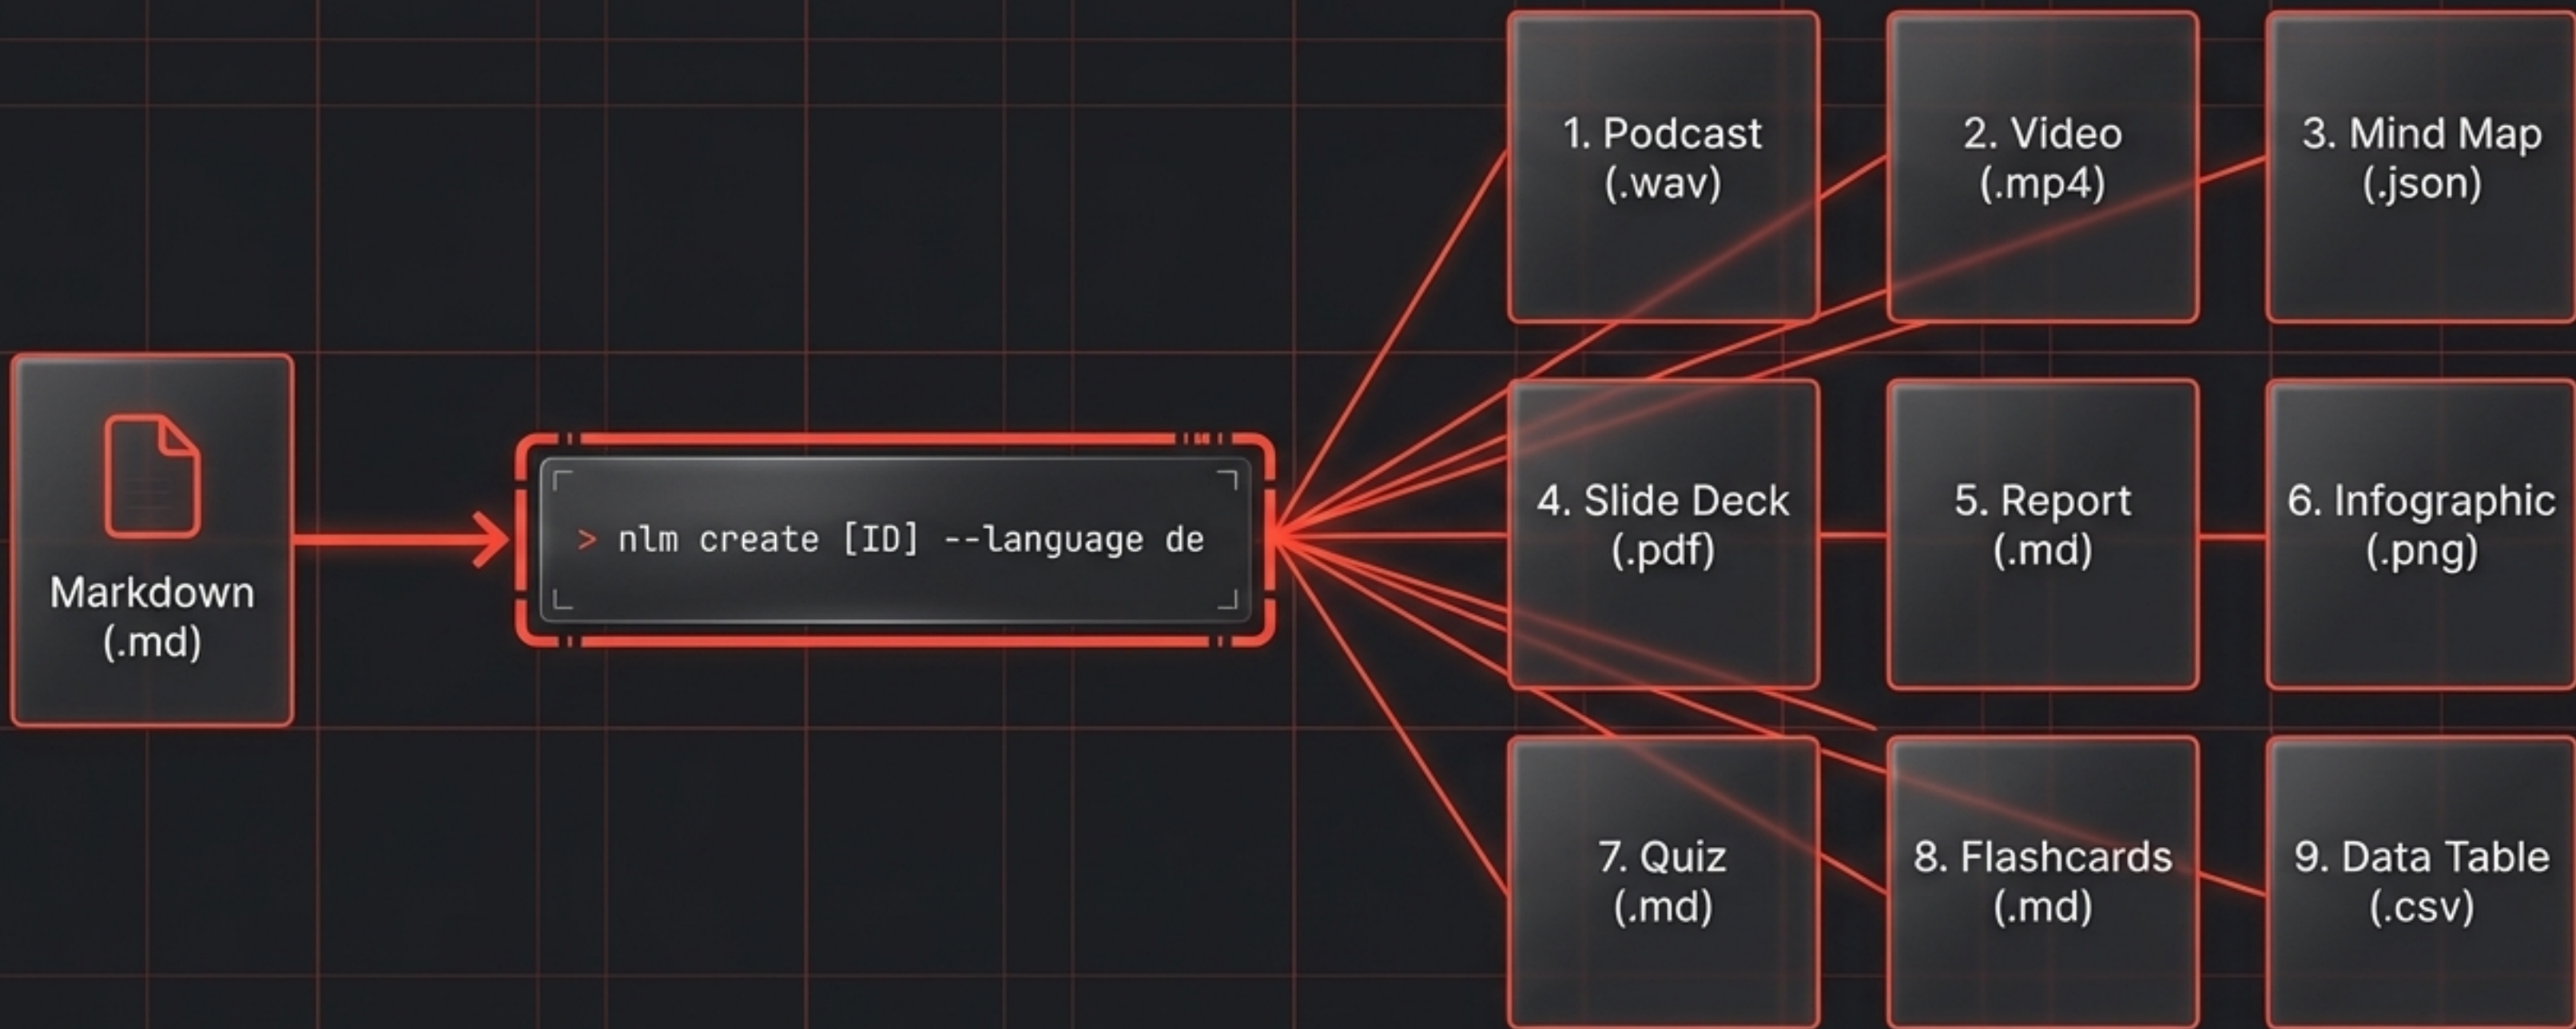

Injects context directly into ChatGPT, Claude, and Gemini interfaces via content scripts.

8-Tab Architecture

Clipboard memory, Web Scrapers, Color Pickers, and universal TTS.

Supabase/DuckDB- WASM Sync

Bridges web-scraped data and copilot chats directly back into the core Vanilla ecosystem.

Rule R31: Every completed **project** automatically generates **9 content types**, deposited directly into the immutable Archival Hub for human and AI consumption.

The Iron Laws of Governance (REGELWERK)

[RULE 00]

Be the solution.

Never pass a problem down the pipeline.

[RULE 01]

Never delete.

Archiving is the only acceptable state change.

[RULE 02 / R101]

Continuous anchoring.

Commit and push to Git after every single atomic change.

[RULE 11]

Absolute Sovereignty.

No automated process may overwrite, move, or export files without explicit human confirmation.

[RULE 16]

Laws override instructions.

AI agents must halt and refuse prompts that violate the constitution.

The Unified Vanilla Engine.

DEVKITZ is not a toolset. It is a self-documenting, AI-orchestrated, immutable civilization. Governed by unbreakable laws. Executed with zero dependencies.

Build. Ship. Scale. — Pure Vanilla.
